Patent No. 5861283

GENERAL INFORMATION:
APPLICANT: Levitt, Pat
APPLICANT: Pimenta, Aurea
APPLICANT: Pischer, Itzher
APPLICANT: Zhukareva, Victoria
ITILE OF INVENTION: Linibic System-Associated Membrane
TITLE OF INVENTION: Protein and DNA
NUMBER OF SEQUENCES: 60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AUDKESSEE: Dechert Price & Rhoads

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 60, Application US/08414657D

Patent No. 5861283

GENERAL INFORMATION

APPLICANT: Devitt, Pat

APPLICANT: Fischer, Itzhak

APPLICANT: Fischer, Itzhak

APPLICANT: Andereva, Victoria

TITLE OF INVENTION: Limbic System-Associated Membrane

TITLE OF INVENTION: Protein and DNA

NUMBER OF SEQUENCES: 60

NUMBER OF SEQUENCES: 60

CORRESPONDENCE ADDRESS:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 47, Application US/08414657D
Patent No. 5861283
GENERAL INFORMATION:
APPLICANT: Levitt, Pat
APPLICANT: Pimenta, Aurea
APPLICANT: Fischer, Itzhak
APPLICANT: Zhukareva, Victoria
TITLE OF INVENTION: Limbic System-Associated Membrane
TITLE OF INVENTION: Protein and DNA
NUMBER OF SEQUENCES: 60
                                                                        COMPUTER READABLE FORM:
MEDIUM TYPE: Diskette
COMPUTER: IBM Compatible
OPERATING SYSTEM: DOS
CURRATING SYSTEM: DOS
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/414,657D
FILING DATE: 31-MAR-1995
CLASSIFICATION 1435
PRIOR APPLICATION DATA:

DEVELOPMENTAL STAGE: Expressed by developing cerebellar Purkinje cells. Expression coincides with the growth of the dendritic tree, after Purkinje cells have finished their migration from the ventricular zone (from E1s until E21). Expressed in the adult. SIMILARITY: Belongs to the immunoglobulin superfamily. IgLON

05-JUL-2004 (TrEMBLrel. 27, Last annotation update)
Neural secreted glycoprotein (CEPU-Se alpha 2 isoform).
Name=CEPU; Synonyms=CEPU-Se;
Gallus gallus (Chicken).
Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
Archosauria; Aves; Neognathae; Galliformes; Phasianidae; Phasianinae;
 N-linked (GlcNAc. .) (Potential).
N-linked (GlcNAc. .) (Potential).
N-linked (GlcNAc. .) (Potential).
GPI-anchor amidated serine (Potential).
                                                                                                                                                         11; Gaps

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Neural cell adhesion molecule 1 precursor, GPI-anchored splice form - mouse

Notation in NCAM-120

C.Species: Mus musculus (house mouse)

C.Species: Mus musculus (house mouse)

neural cell adhesion molecule 1 - African clawed frog
N'Alternate names: N-CAM 1
N'Alternate names: N-CAM 1
N'Alternate names: N-CAM 1
N'Alternate names: N-CAM 1
C'Species: Xenopus laevie (African clawed frog)
C'Date: 19-May-1998 #sequence_revision 29-May-1998 #text_change 09-Jul-2004
C'Accession: JE0099
E'Accession: JE0099
E'A Tatale: Molecular Commun. 245, 127-132, 1998
A'Title: Molecular Choning of sad-form neural cell adhesion molecules (N-CAMS) as the ma
                                                                                                                                                                                                                                                                                                                                                                                                                              A; Molecule type: mRNA

A; Mesidues: 1-725 < KUD.

A; Estadues: 1-725 < KUD.

A; Experimental source: heart

C; Comment: This protein mediates and regulates various cell-cell interactions through bo-

C; Superfamily: neural cell adhesion molecule; fibronectin type III repeat homology; immun

F; 413-475, Domain: immunoglobulin homology < IIM.

F; 512-589, Domain: fibronectin type III repeat homology < 3FR>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Nalternate names: NCAM-180

C; Superfamily: neural cell adhesion molecule, fibronectin type III repeat homology; immu C; Keywords: alternative splicing; brain; cell adhesion; duplication; heparin binding; si F;1-19/Domain: signal sequence #status predicted <incell-solution in signal sequence #status predicted <incell-solution in sexperi F;20-809, 1077-1115/Product: neural cell adhesion molecule, long domain splice form #status F;20-711/Domain: extracellular #status predicted <incell-solution homology <incell-solution immunoglobulin homology <incell-solut
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             A;Molecule type: protein
A;Residues: 20-36 <ROU>
C;Comment: NCAM mediates cell-cell adhesion via homophilic binding with another NCAM mol
C;Comment: Several forms of NCAM are produced by alternative splicing. See also PIR:IJMS

A;Note: the authors translated the codon AAA for residue 970 as Leu

A;Note: the authors translated the codon AAA for residue 970 as Leu

C;Comment: NCAM mediates cell-cell adhesion via homophilic binding with another NCAM mol

C;Comment: Several forms of NCAM are produced by alternative splicing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        44 NVTVRQGESATLRCTIDN-RVTRVAWLNRSTILYAGNDKWCLDPRVVLLSNTQTQYSIEI
